

Pre-filled Electronic Forms Solutions
Secure Portable Data

What is Prefill.com?

- Prefill.com is a distributed solution that provides automatic filling in of custom forms with personal information.
- Prefill.com consists of a neutral database, with generic input forms and custom output forms.
- Prefill.com uses secure keys to provide access to confidential data.
- A browser and 2-factor ID is required to interact with Prefill.com.
- This type of solution is already in use by many health care providers, but only as a custom-designed solution only for their specific environment.

How is Prefill.com used?

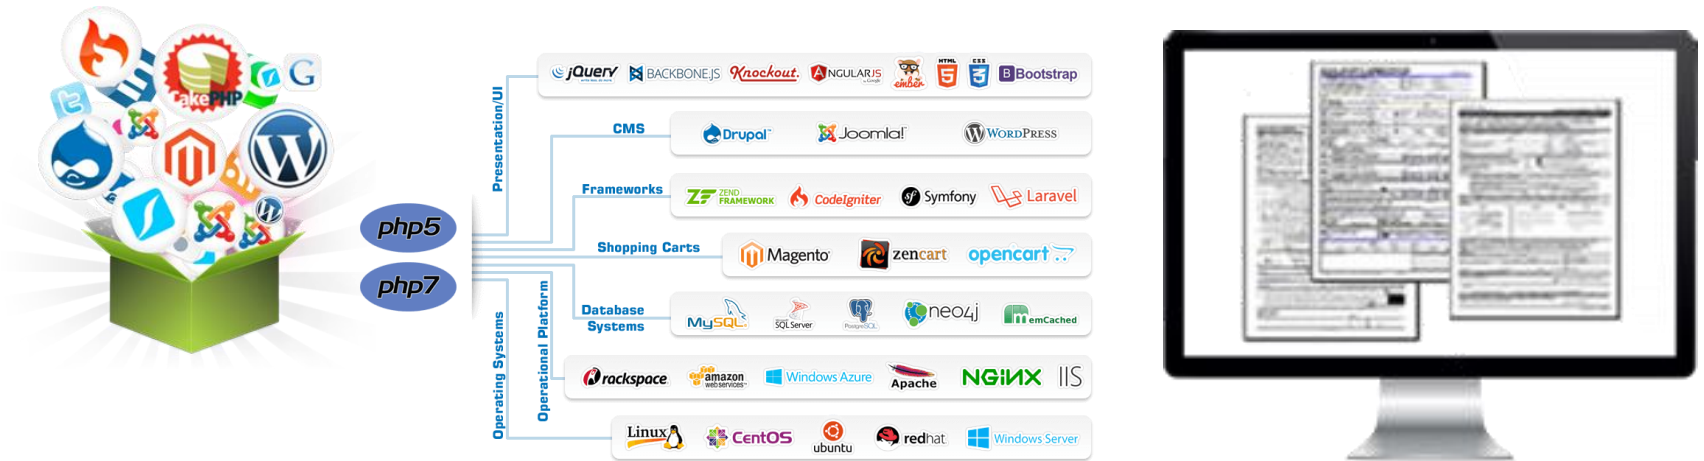

- Primary objective is to automate the filling out of admission forms when receiving health care services. The “clipboard” of forms.
- Patient information is pre-filled into a database, by the patient or by a provider with patient authorization.
- Information is tagged as to age, provider, and permissions.
- Patient provides authorization to provider during registration process, to access info from Prefill.com.
- Provider is a subscriber to Prefill.com, and has their forms constructed as PDFs that are auto populated, to be printed or saved locally.
- Data from Prefill.com can also be flowed into provider’s paperless patient data system.
